

Oil Keeper

Plant Fiber Super Adsorbent Material

Excellent Adsorbent Ability

Manage Oil Leakage

Protect Water Resources

Maintain Environmental Sanitation

Product Features

- Made from natural plant fiber which only adsorb oil.
- Enhanced adsorbing capacity, can adsorb more than 25 times of the weight itself.
- Doesn't adsorb water
- Stay on the surface of the water before and after adsorb oil.
- Easy to dissolve and dispose by incinerate it, only small amount of ashes will be generated and low CO2 emission.

Applications

- Marine and Harbor : Pollution by vessel aground
- Lake, River and Reservoir : Environmental maintenance
- Factory : Oil leakage from machines and treatment before discharging waste water
- Food Court and Restaurant : Simplify the process of cleaning kitchen grease tank

Neat Oil Keeper

Comparison Between Plant Fiber and Polypropylene Fibers

Plant Fiber	PP Fiber
Adsorb ability is 25 times of the product weight	Adsorb ability is less than 10 times of the weight itself
Oil is not easy to be released back to the environment	Oil is easy to be released after adsorption
Anti-static	Static electricity occurred from time to time
80% Re-use adsorbent capacity	Can not be reused
Long-term storage is allowed	Difficult to preserve, easily affected by temperature and lighting changes
Amount of CO ₂ generated is 1/2 of burning the PP Fiber	2 times CO ₂ generated than burning the plant fiber product
Easy to clean, only little ashes after burned	Difficult to clean after burning, plastic agglomeration will be generated and damage the incinerator
